Solution to Q1.3.4

Mayank Gupta

Question: Find the intersection **H** of altitudes BE_1 and CF_1

Solution: Equation of BE_1

$$(1 \quad 1)\mathbf{x} = 2 \tag{1}$$

Equation of CF_1

$$(5 -7)\mathbf{x} = 20 \tag{2}$$

Therefore, we need to solve the following equation to get H:

$$\begin{pmatrix} 1 & 1 \\ 5 & -7 \end{pmatrix} \mathbf{x} = \begin{pmatrix} 2 \\ 20 \end{pmatrix} \tag{3}$$

Solving the above equation by Gauss-Jordan method

$$\begin{pmatrix} 1 & 1 & 2 \\ 5 & -7 & 20 \end{pmatrix} \xrightarrow{R_2 \leftarrow R_2 - 5R_1} \begin{pmatrix} 1 & 1 & 2 \\ 0 & -12 & 10 \end{pmatrix} \tag{4}$$

$$\stackrel{R_2 \leftarrow \frac{R_2}{-12}}{\longleftrightarrow} \begin{pmatrix} 1 & 1 & 2 \\ 0 & 1 & \frac{-5}{6} \end{pmatrix} \tag{5}$$

$$\stackrel{R_1 \leftarrow R_1 - R_2}{\longleftrightarrow} \begin{pmatrix} 1 & 0 & \frac{17}{6} \\ 0 & 1 & \frac{-5}{6} \end{pmatrix} \tag{6}$$

Therefore point of intersection H is

$$\mathbf{x} = \begin{pmatrix} \frac{17}{6} \\ \frac{5}{6} \end{pmatrix}$$

$$= \begin{pmatrix} 2.833 \\ -0.833 \end{pmatrix}$$
(8)

$$= \begin{pmatrix} 2.833 \\ -0.833 \end{pmatrix} \tag{8}$$
